

seL4 Camkes VM Examples

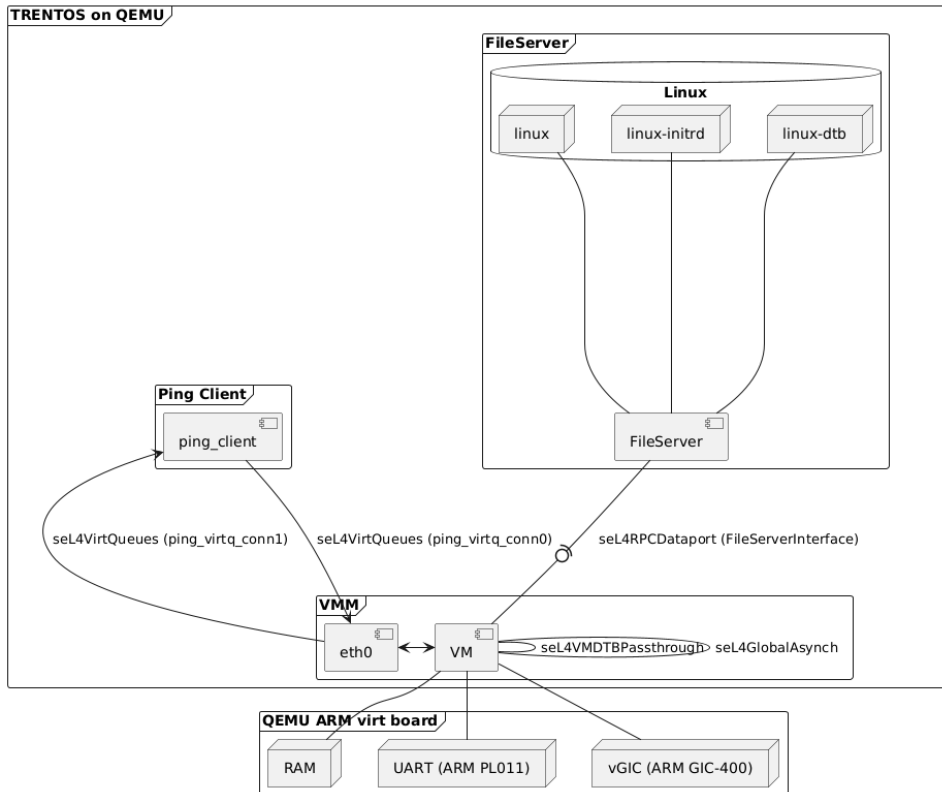

WIP

VM Examples

- **vm_minimal**
 - Runs one Linux VM
 - Uart is passed to guest
 - Good to test if general setup is working
- **vm_serial_server**

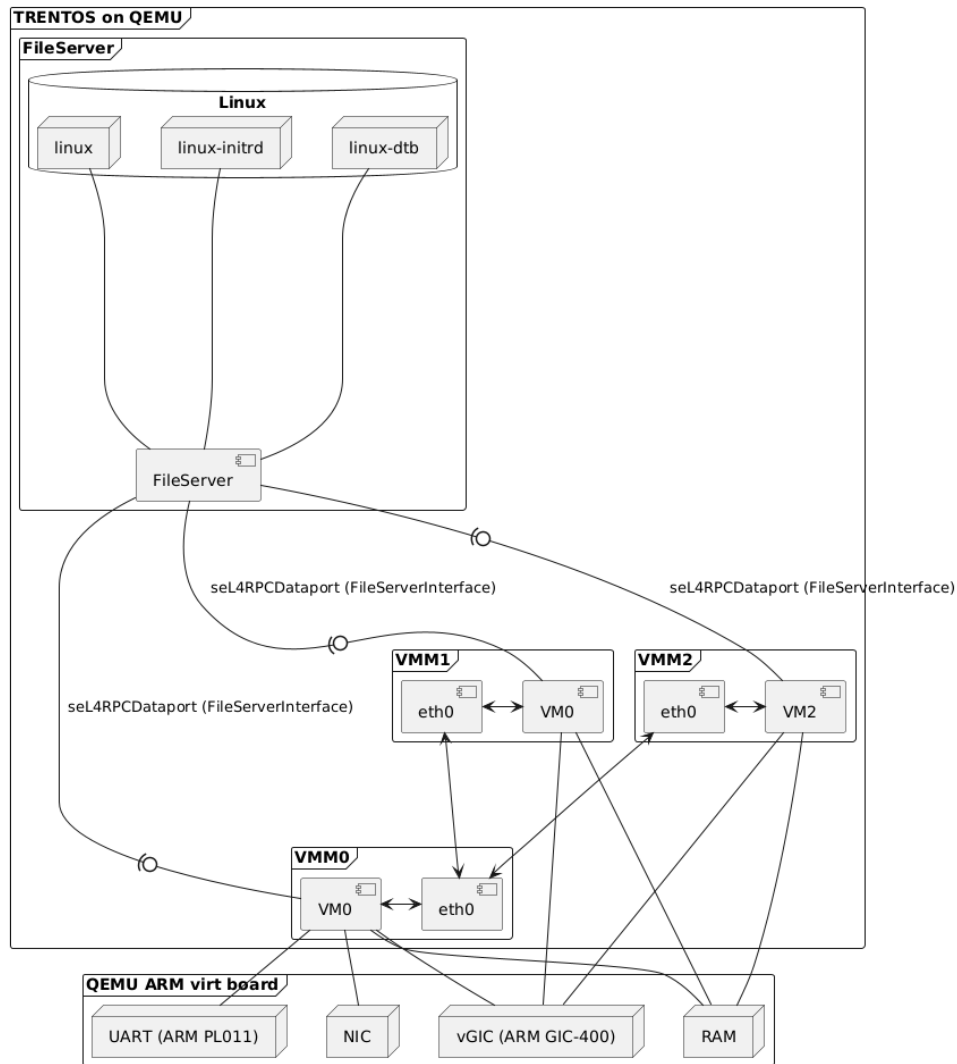

- Runs one Linux VM
 - Introduces the Serial Server capable of multiplexing multiple VMs UARTs
 - colors for each vm the text in a different color
 - escapment symbol is @ , use @? to get help page in terminal
- **vm_virtio_net**

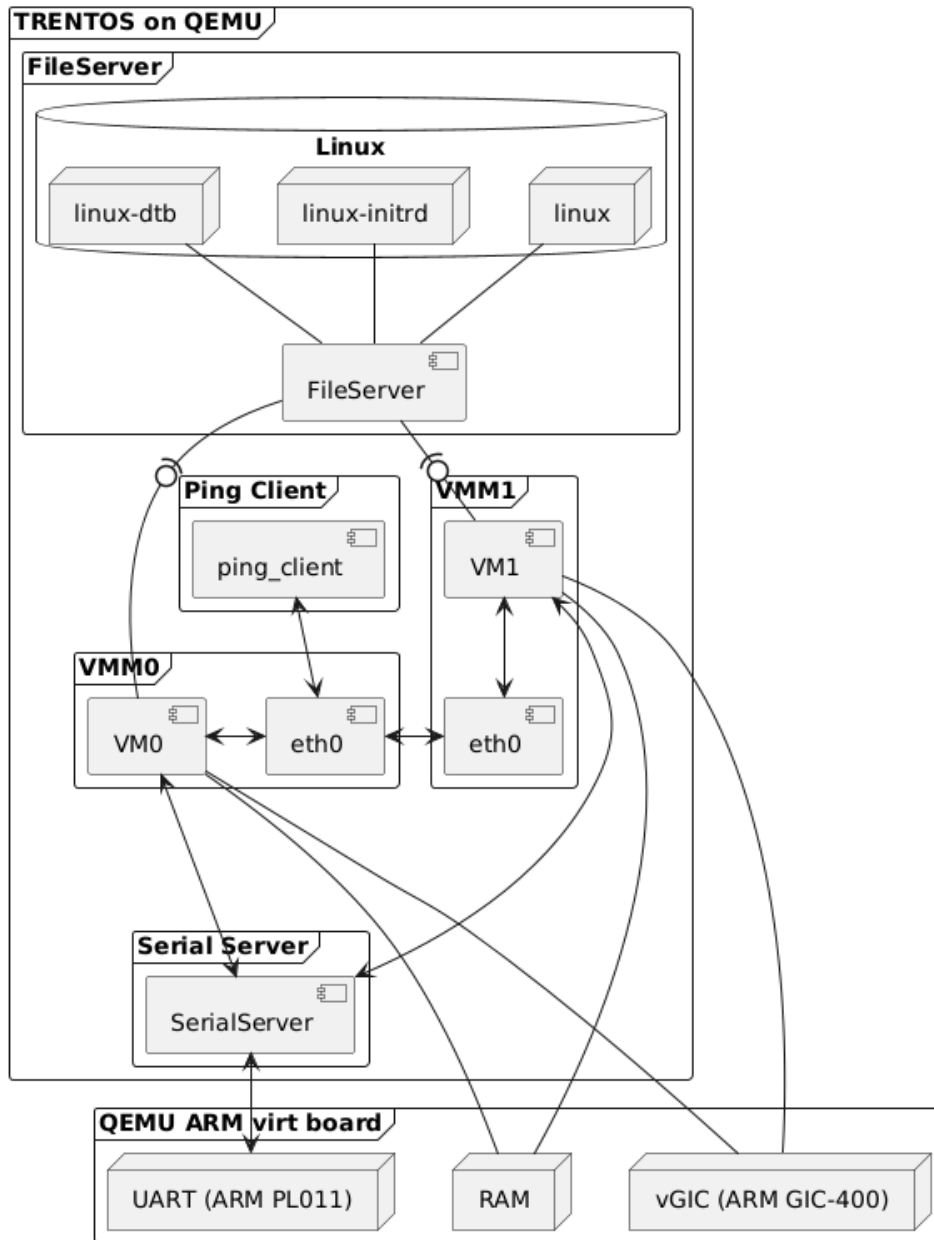

- Runs one VM
- Adds a PingClient component, that response to ping packets
- VM and ping client communicate through VirtQueues
- VM gets uart passed directly

vm_multi

- **vm_multi**
 - Runs 3 Linux VMs in Parallel
 - VM0 has the Network interface controller (NIC) mapped
 - Vm1 and VM2 can only communicate with vm0, not between each other
 - VM0 has the uart mapped
- **vm_combined_example** (TBD give our example usefull name)

Our Example

- Runs 2 Linux VMs
- VM1 and PingClient can communicate with VM0 but not between each other
- Serial Server collects UART of both VMs and prints it. Can Multiplex input between VMs
- Combination of `vm_serial_server` and `vm_virtio_net`
